## SUMMARY

I'm a robotics software generalist. I work between robotics, DevOps, web dev, and product to find and address high-impact problems, vertically. That said, I'm currently interested in robotics/XR/IoT framework/integration, sim, and dev tooling.

## EXPERIENCE

### Senior Robotics Engineer

2020 – 2023

*Intrinsic/Vicarious (Vicarious was acquired by Intrinsic in May, 2022)*

Seattle, WA (Remote)

- Worked on an intelligent robotics platform, e.g., (1) IDE-based developer tools and (2) simulation-based testing tools.
- Led the effort to adopt service-oriented architecture on deployed robot applications and then collaborated to deliver human-machine interface integration, containerization, and application management command-line tools.
- Collaborated with Grasping, Motion Planning and Control teams to design, plan, and adopt service-oriented architecture on deployed components to improve application initialization/execution speed, robustness, and isolation.
- Designed and prototyped Hardware-in-the-Loop-like simulation for testing robot fleet-level applications.

### Robotics Applications Engineer

2016 – 2018

*Savioke*

San Jose, CA

- Contributed to developing and maintaining on-board and desktop application backends (e.g., a single and multi-robot behavior management system) and support infrastructure (e.g., configuration and notification management systems) that were deployed to 50+ mobile robots.
- Deployed a non-roboticist-friendly robot programming system and used it for collaborating with partner companies including an airport management company in Southeast Asia.
- Explored new mobile robot applications using techniques adopted from product design research, which resulted in beta applications and academic publications.

### Research Assistant

2018 – 2020 & 2011 – 2015

*University of Washington*

Seattle, WA

- Designed, built, and 3+ evaluated robot programming systems for non-roboticist developers with inspirations drawn from programming languages research and web development communities' work.
- Built and deployed end-to-end mobile robot and robot manipulator applications involving perception, planning and control, and UI components; evaluated the applications by conducting user studies.
- Communicated insights in 20+ publications and 10+ presentations at major robotics conferences.
- Recruited, trained, and mentored 14 undergraduate students and co-authored 5+ academic papers with 7 of them; two students started their own research projects which resulted in academic publications.

## EDUCATION

**Ph.D.** Computer Science & Engineering, University of Washington (2020)

**Master of Science** Computer Science & Engineering, University of Washington (2013)

**Bachelor of Science** Computer Science, University of Washington (2010)

## SKILLS

**Knolwedge** : Robotics Software Architecture/Algorithms/Metrics, Distributed/Simulation Systems, Developer Tooling, DevOps, Web Development, Requirement Elicitation, Project Planning, User Research/Study

**Tools** : PL (e.g., Python, C++, Go, JavaScript), Math (e.g., Eigen, numpy), Robotics Infra/Arch (e.g., Linux, ROS), IPC (e.g., gRPC, WebSocket), DevOps (e.g., git, Bazel, GitHub Actions, Docker, Dev Container), DataViz (e.g., Matplotlib, Vega-lite, Foxglove Studio), WebDev (e.g., React, Node.js, ReactiveX)

**Langauages** : English (fluent), Korean (native)
