Maxwell Forbes, Maya Cakmak and Rajesh P.N. Rao

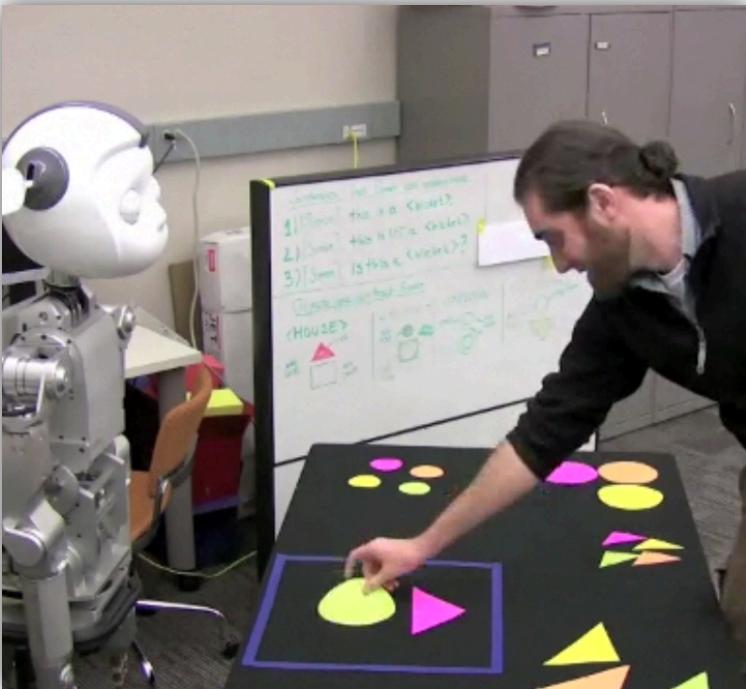

In The Future...

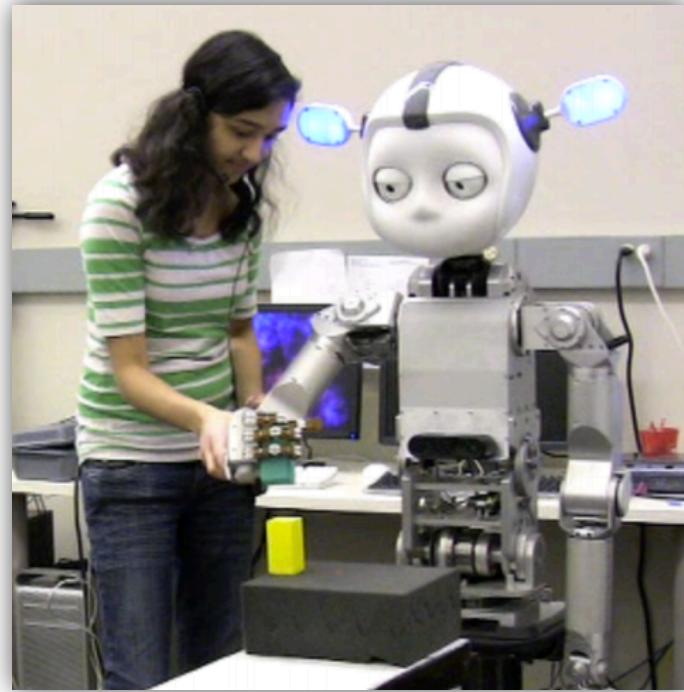

Robot & Frank, 2012

Imitation Learning

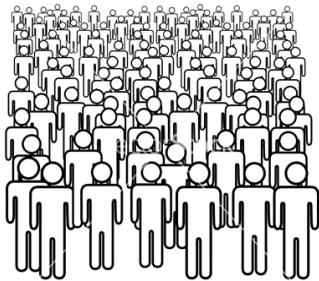

Cakmak et al., TAMD 2010

Akgun et al., HRI 2012

Requires many demonstrations!

Our Approach

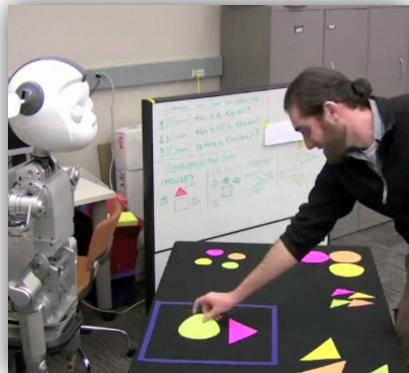

Use crowdsourcing
to collect demonstrations!

Goal-based Imitation Learning

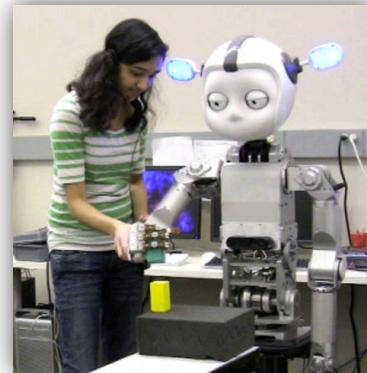

TASK LEARNING

Learning what to do
(goal-based imitation)

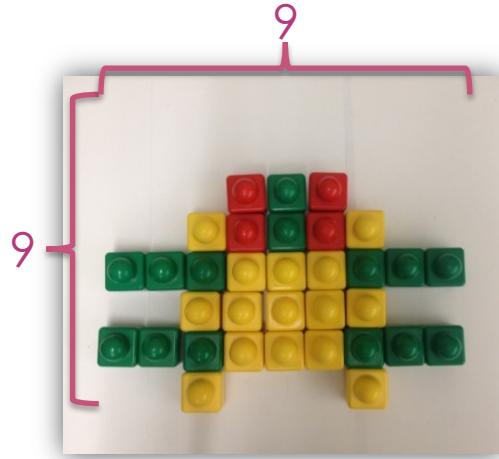

SKILL LEARNING

Learning how to do things
(mimicking)

2D Object Building Task

Class name: **turtle**

Red part name: **eyes**

Yellow part: **carapace**

Green part name: **body**

Blue part name: **N/A**

2D Object Building Task

DEMONSTRATION

Class name: **turtle**

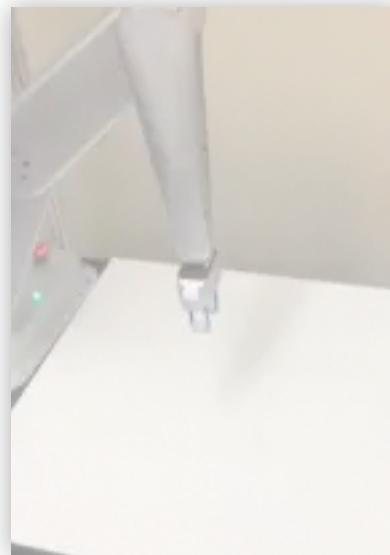

Red part name: **eyes**

Yellow part: **carapace**

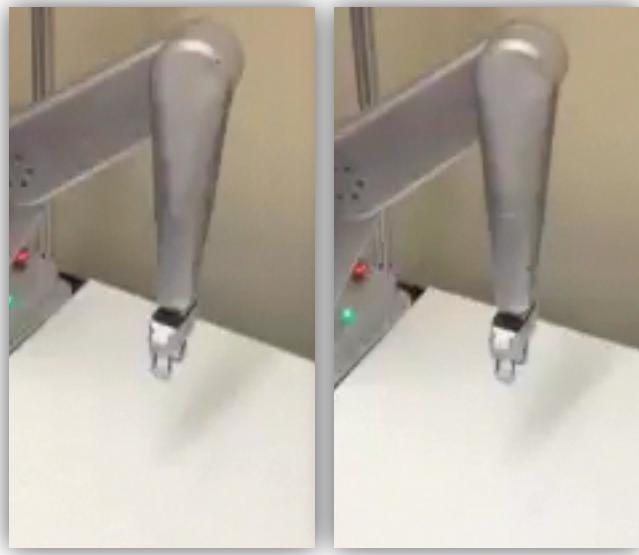

Green part name: **body**

Blue part name: **N/A**

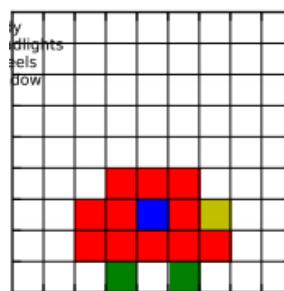

DIRECT IMITATION

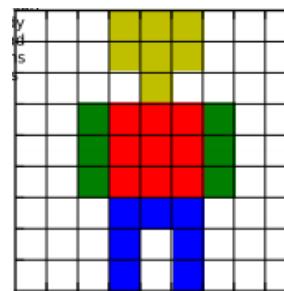

CROWD-BASED IMITATION

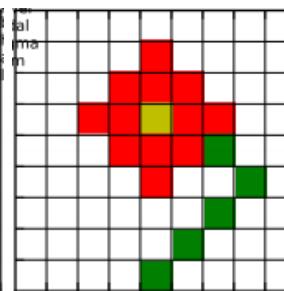

2D Object Building Task

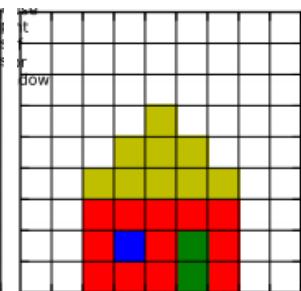

car

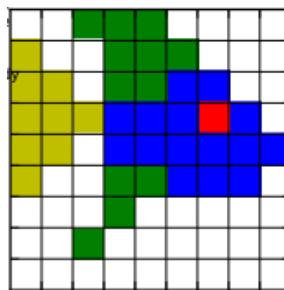

person

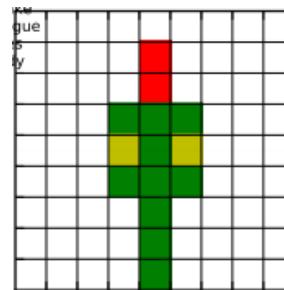

flower

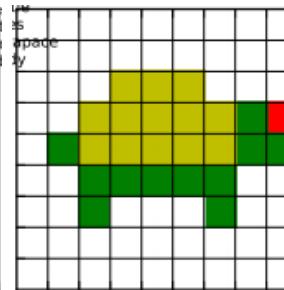

house

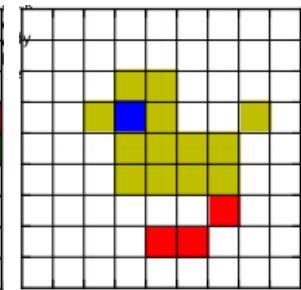

fish

snake

turtle

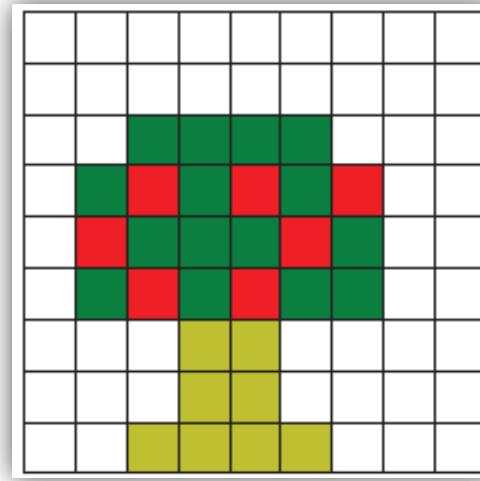

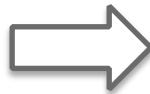

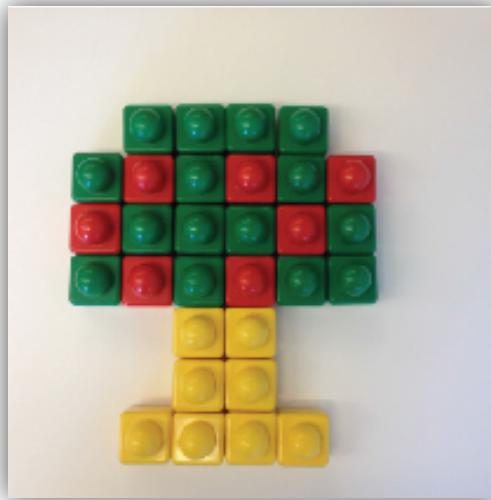

chick

Framework

Local demonstration

seed demonstration

Crowd data collection

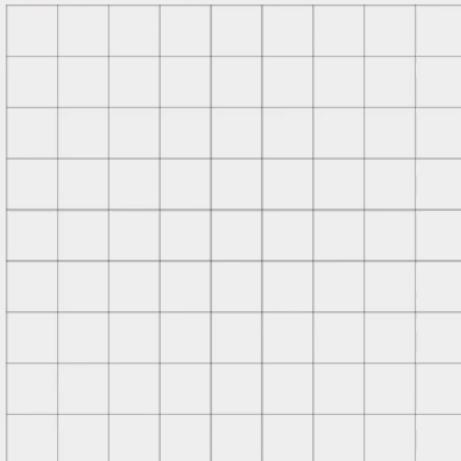

Create a 2D Lego model!

Help us teach our robot friend, [Gambit](#), to build Lego models by making a creative Lego model! Gambit can build [2D Lego models](#). For some tasks, give a title to your model and name the colored parts of your model, like [this](#). Use at least 10 blocks and press "Done" when finished. Thank you!

Hover your mouse over the links to see pictures.

[1/1] Build: Tree with colored parts using given part-names.

```
KEYBOARD> 1: RED, 2: YELLOW, 3: GREEN, 4: BLUE  
MOUSE> CLICK: ADD BLOCK, SHIFT + CLICK: REMOVE BLOCK | CLEAR  
REMANING BLOCKS> #R=15 #Y=15 #G=15 #B=15
```

Title

Red Part Name

Yellow Part Name

Green Part Name

Blue Part Name

Comments are welcome!

Crowd data evaluation

Rate 2D Lego models!

A 2D Lego model is a flat, Lego-like creation with 4 different colors. Each color represents a "part" of the creation, and is tagged with a one-word description. Please rate the following 2D Lego models on a scale of 1-5: (1) poor, (2) fair, (3) good, (4) very good and (5) excellent. *Part names should be considered in the rating of the 2D Lego model.*

Model #1

Title: Car

Red Part Name: Body

Yellow Part Name: Headlights

Green Part Name: Wheels

Blue Part Name: Window

Rate this model (if radio doesn't work, click the word):

- 1 poor 2 fair 3 good 4 very good 5 excellent

Imitation as Search

$$x^* = \underset{x \in X_c}{\operatorname{argmin}} \underline{\operatorname{score}(x)}$$

Score1: difficulty

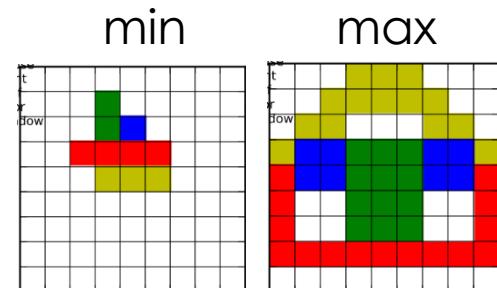

Score2: difficulty + rating

Score3: difficulty + similarity

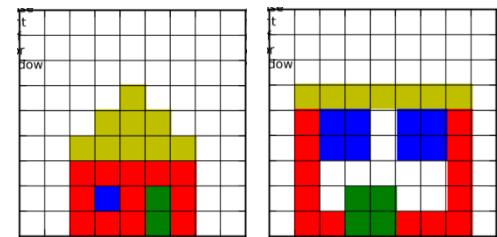

Imitation as Search

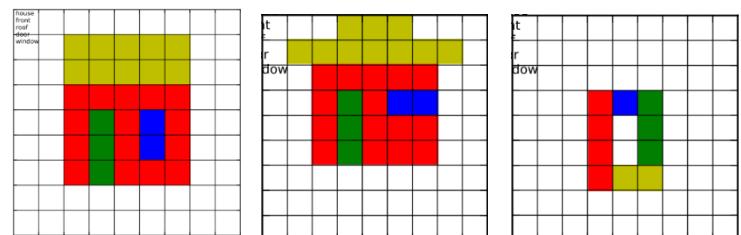

Score1: difficulty

Score2: difficulty + rating

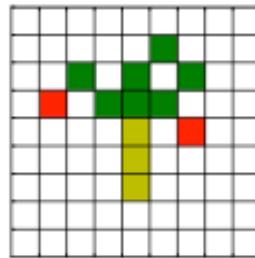

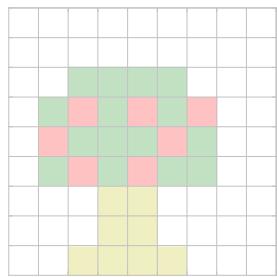

Score3: difficulty + similarity

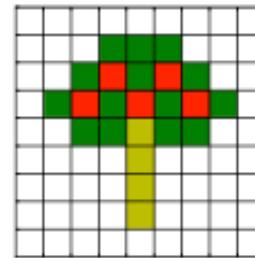

Final user selection

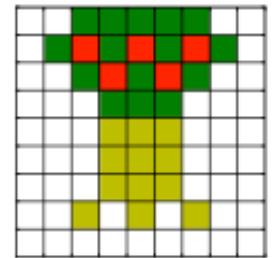

Which one should be executed?

candidate1

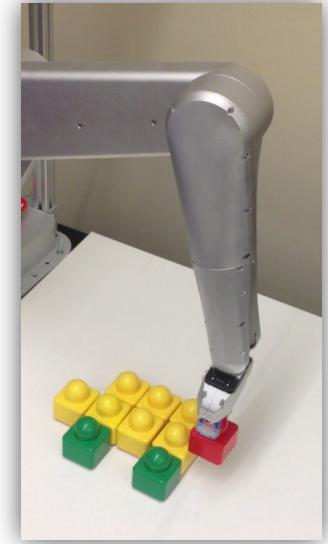

candidate2

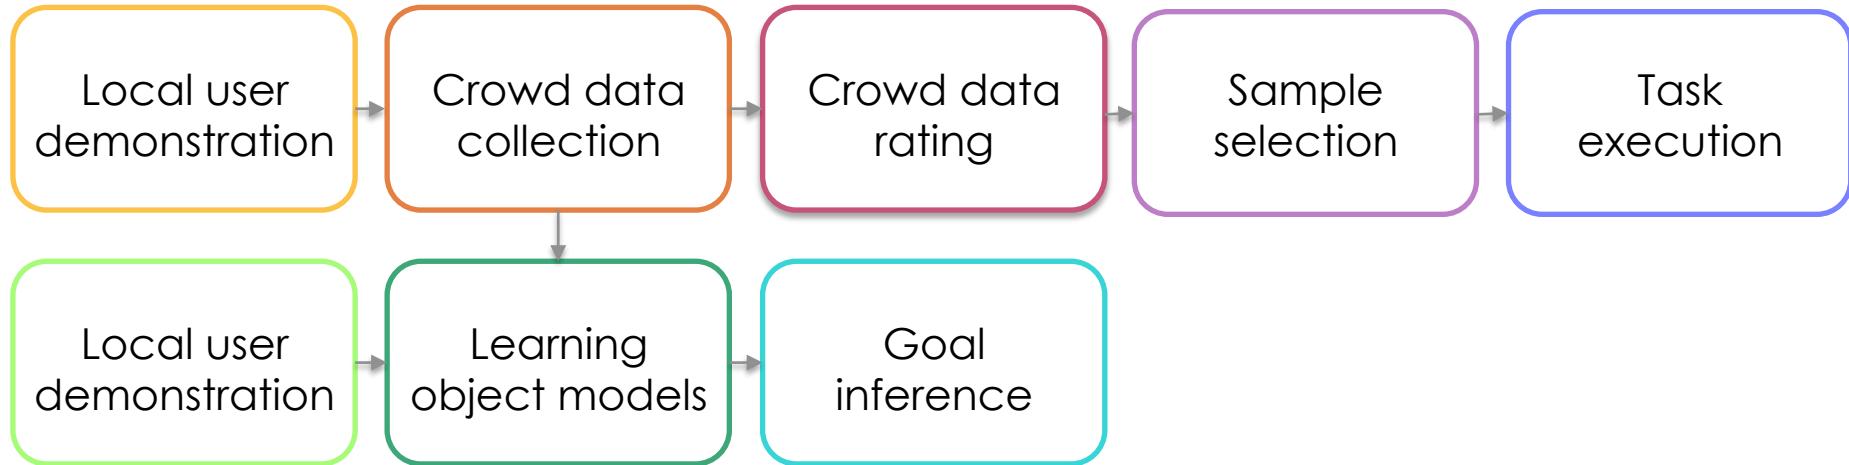

candidate3

Task execution

Learning and Goal Inference

Evaluation

- Objective evaluation
 - Imitation result analysis
- Subjective evaluation
 - User study result

Objective Evaluation

3 local users
8 objects

>1000 crowd-workers
~ 800 total demonstrations

METRICS

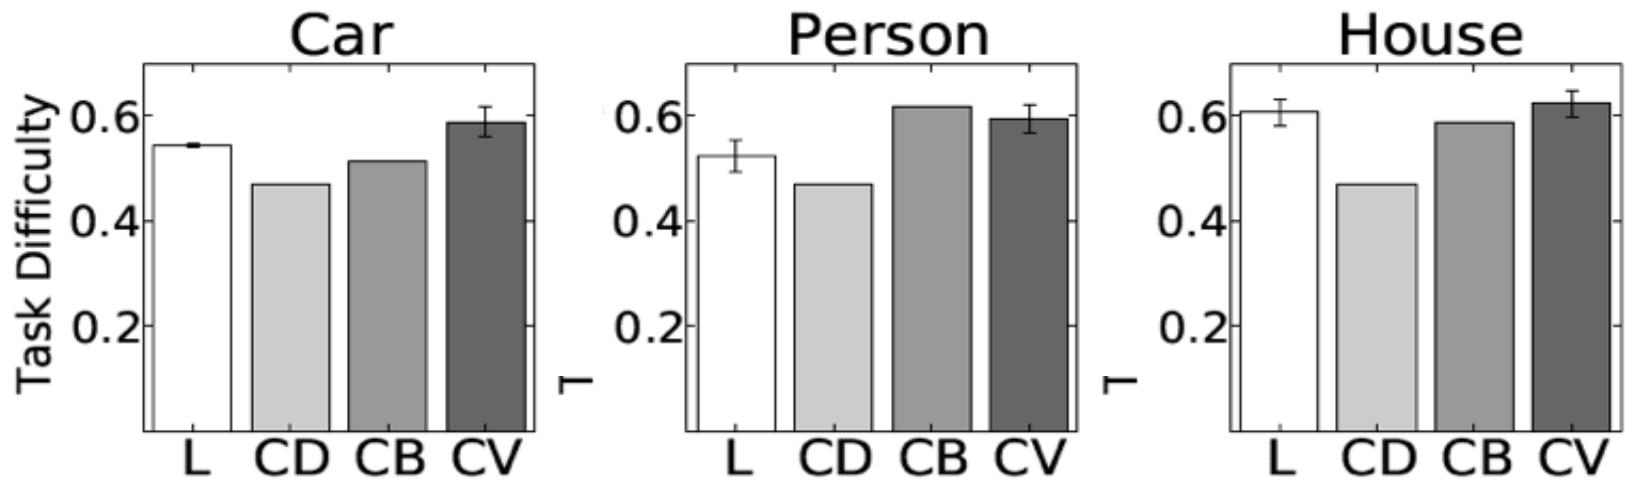

1. task difficulty
2. crowd-rating
3. visual distance to seed

IMITATION CONDITIONS

- (L) Only local user data (score1: difficulty)
- (CD) Crowd data (score1: difficulty)
- (CB) Crowd data (score2: difficulty+rating)
- (CV) Crowd data (score3: difficulty+similarity)

Findings: Task difficulty

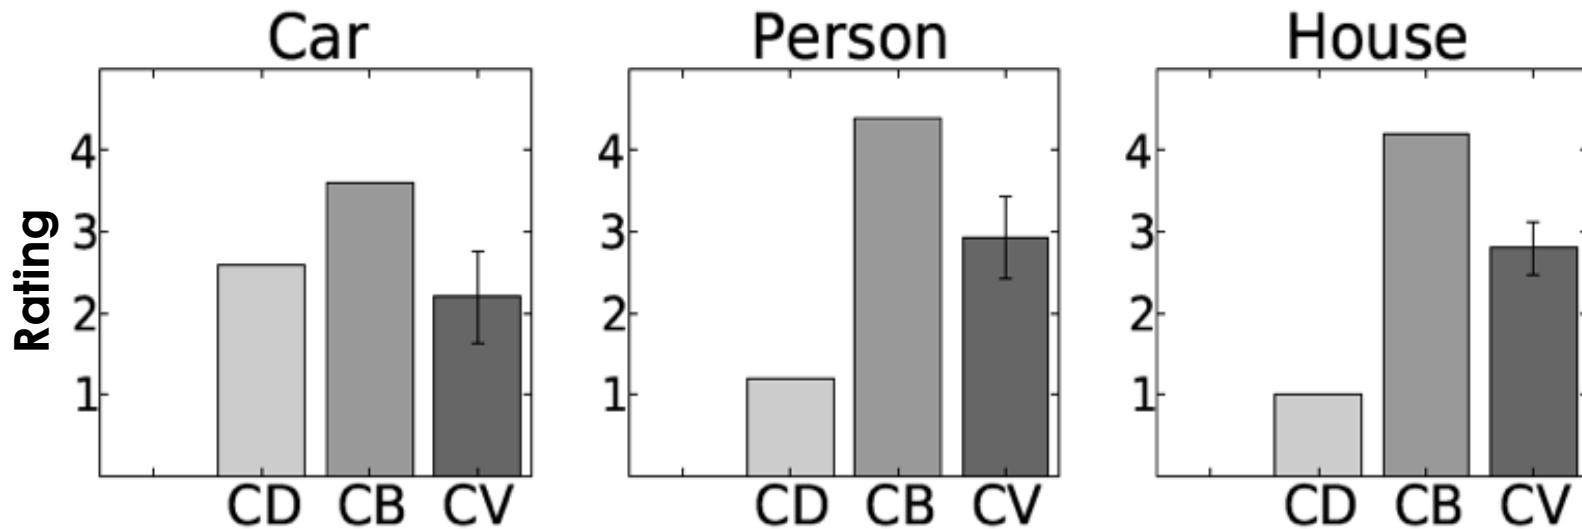

- (CD) has lower task difficulty than (CV)
- (CD) have lower task difficulties than (CB), (CV)
- (L) varies a lot

(L) Only local user data (score1: difficulty)
(CD) Crowd data (score1: difficulty)
(CB) Crowd data (score2: difficulty+rating)
(CV) Crowd data (score3: difficulty+similarity)

Findings: Crowd-ratings

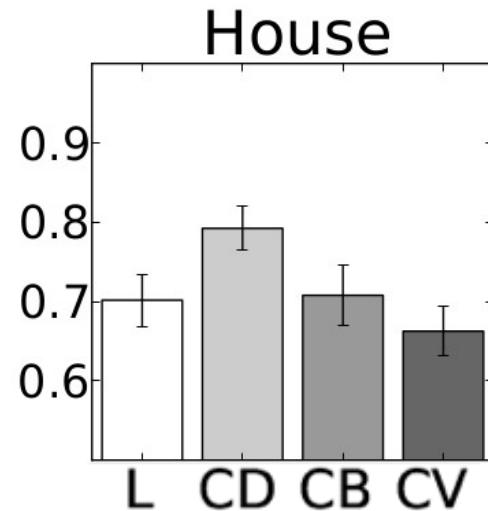

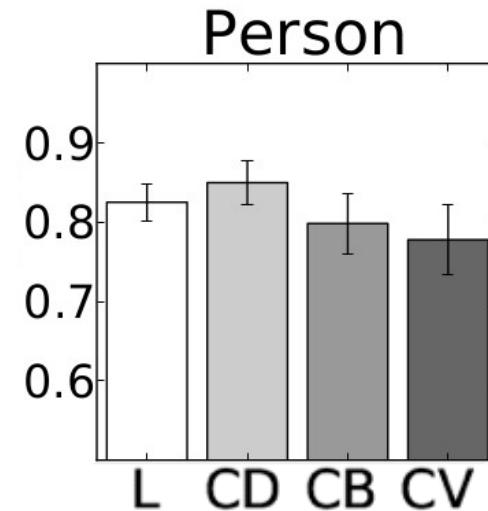

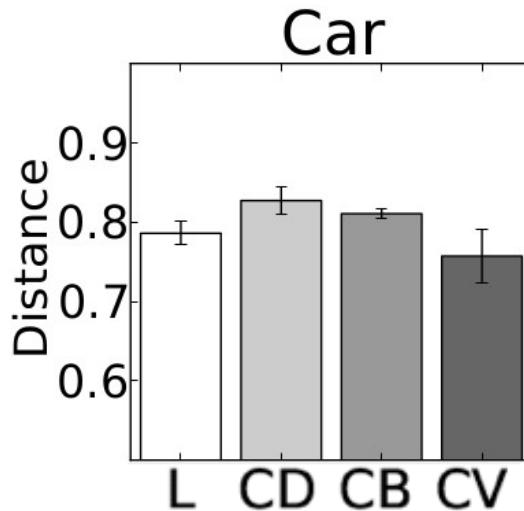

- (CB) has highest ratings
- (CV) varies across classes

(L) Only local user data (score1: difficulty)
(CD) Crowd data (score1: difficulty)
(CB) Crowd data (score2: difficulty+rating)
(CV) Crowd data (score3: difficulty+similarity)

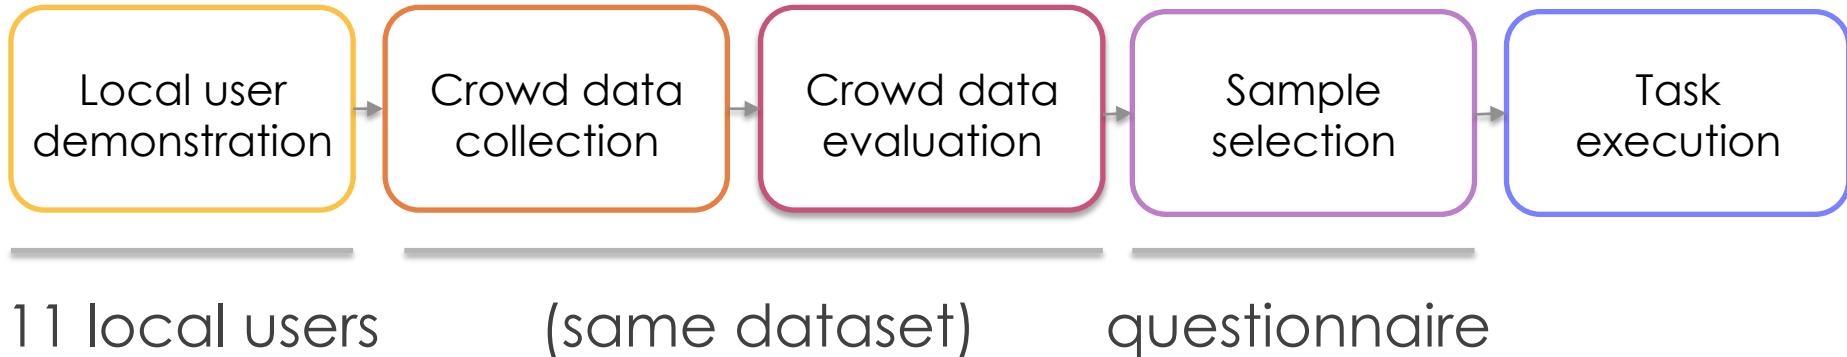

Findings: Visual distance to seed

- (CV) has lowest visual distance

(L) Only local user data (score1: difficulty)
(CD) Crowd data (score1: difficulty)
(CB) Crowd data (score2: difficulty+rating)
(CV) Crowd data (score3: difficulty+similarity)

Subjective Evaluation

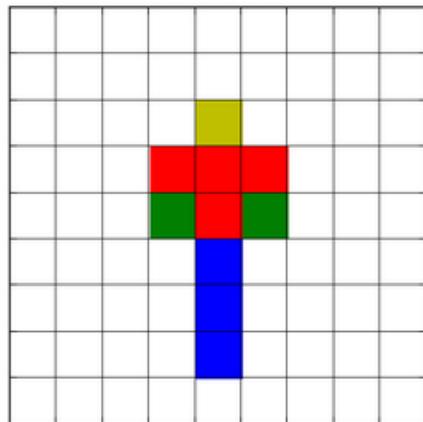

IMITATION METHODS

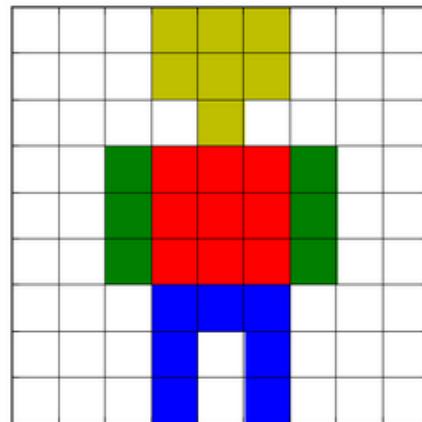

- Score1: difficulty
- Score2: difficulty+rating
- Score3: difficulty+similarity

Question 1

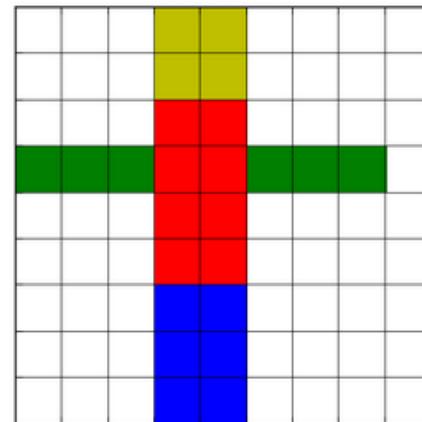

Which one do you prefer for **person**?

candidate1

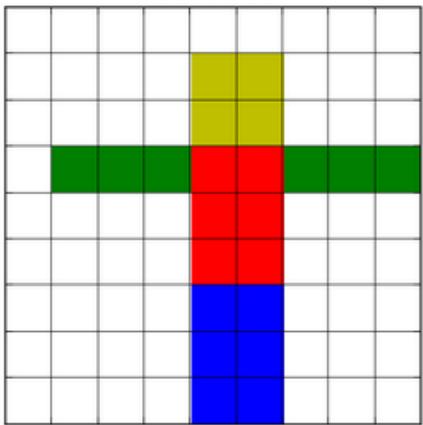

candidate2

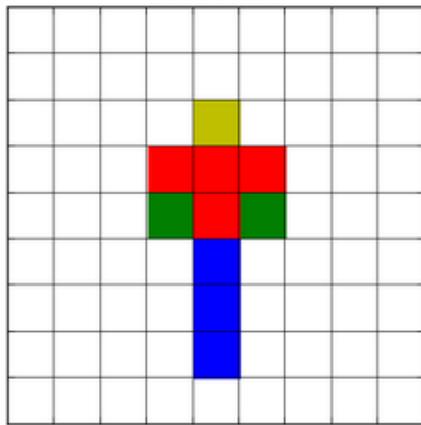

candidate3

Question 2

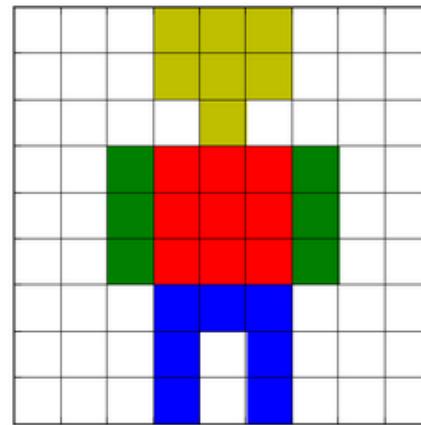

Which one is the best imitation of your demonstration?

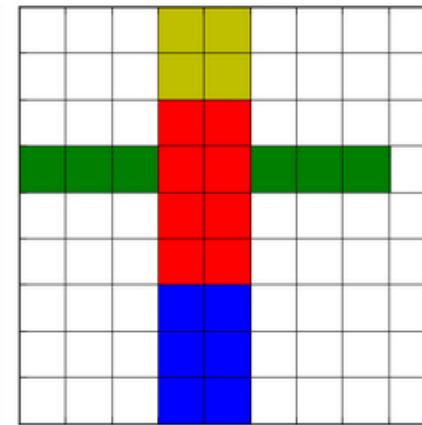

Your Model

candidate1

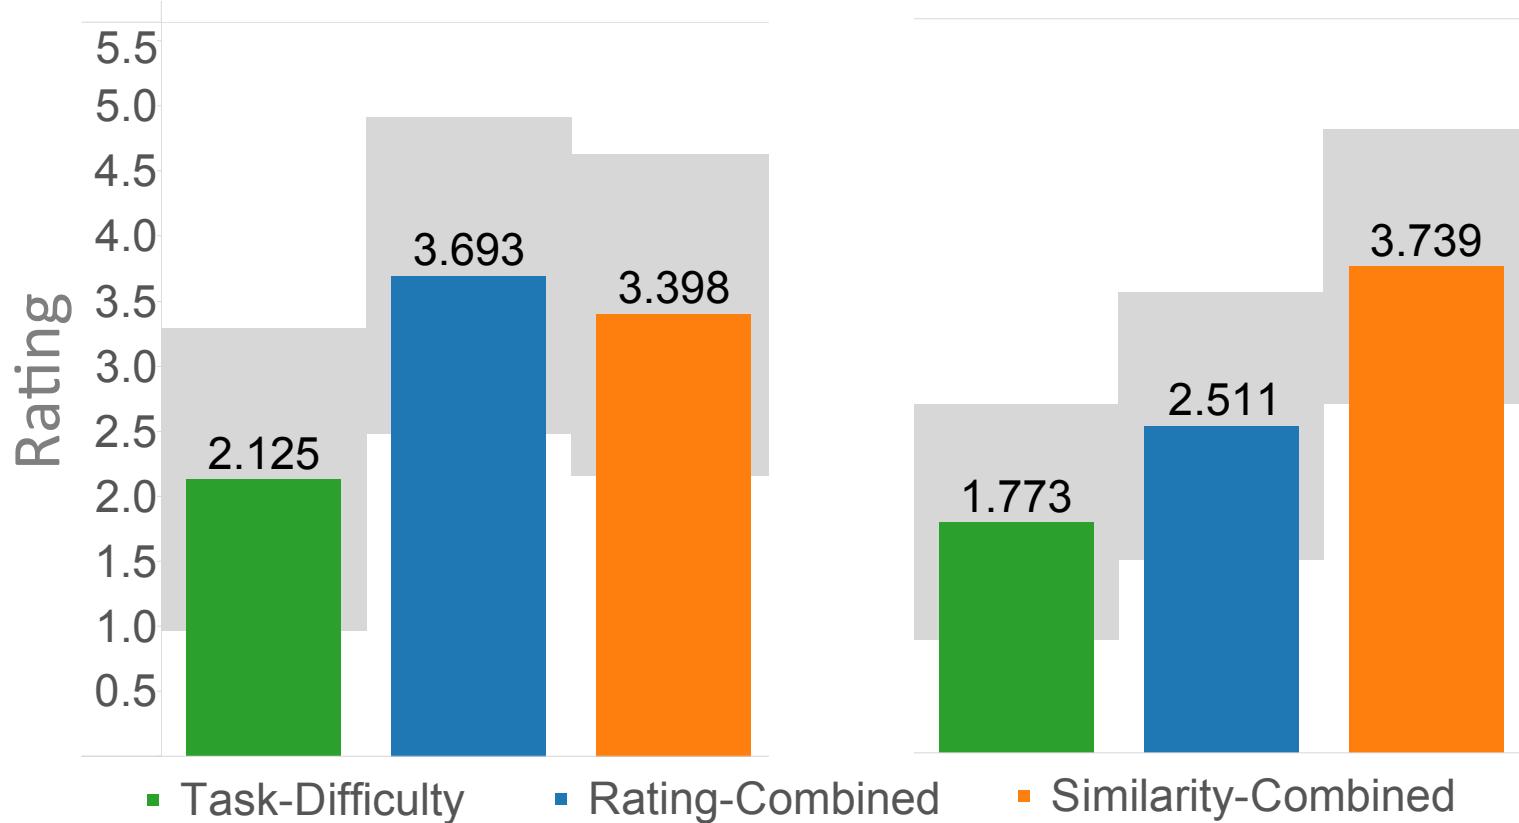

candidate2

candidate3

Findings

Question 1: Best representation

Question 2: Best imitation

Summary

- Rich Set of Examples
- Multiple Goal based Imitation Methods
- Human Robot Collaboration
